

ART IN FOCUS CLASS

New Bern - Saturday, April 2nd
Morehead City - Saturday, April 9th
Time: 10:00 am - 12:00 am

The rain stick is a musical instrument from South America. Traditionally, rain sticks are made from the wood skeleton of a cactus. First, the thorns are pulled off and pushed back through the soft flesh of the cactus. Then the cactus is left in the sun to dry-with thorns on the inside. Later, the hollow cactus is filled with small pebbles and ends are sealed with pieces of wood.

You are going to make your own rain stick!

1. Push/hammer nails in all the holes in the tube.
2. Hot glue a cardboard circle to ONE end only.
3. Put 4 cups of beans into the tube.
4. Add 1 bell.
5. Hot Glue another cardboard circle into the other end.
6. Paint a rainy day scene onto your rain stick. Cover the entire rain stick.
